

Dear Customer,

Quality has always been our driving force and founding Argon Audio is a natural extension of this philosophy.

We have 20 years' experience in creating and specifying high quality products, manufacturing them and selling them on to end users with **Value-for-Money** as the primary aim. And Argon Audio is a brand fully compliant with these values. Design, features and quality standards are all specified in Denmark and manufacturing takes place in the Far East, where quality vendors are highly competitive - and as a result supply outstanding **Value-for-Money** products. – To the delight of both ourselves and our customers!

Congratulations with your Stream2, may it bring years of enjoyment.

1. Introduction

1.1 Safety

Safety Instructions

Please store this instruction manual for future reference.

- Do not use this product near water or moisture.
Clean only with a dry cloth.
Unplug this product from the wall outlet before cleaning.
- Place the unit on a solid surface.
- Do not put it in a closed bookcase or a cabinet that may keep air from flowing through its ventilation openings.
- Do not install near any heat sources, such as radiators, heat registers, stoves or other appliances that produce heat.
- Protect the power cord from being walked on or pinched, particularly at plugs and the point where they exit from the product.
- Servicing is required when the product has been damaged. Do not attempt to service this product yourself. Opening or removing covers may expose you to dangerous voltages or other hazards. Please contact the manufacturer to be referred to an authorized service center near you.
- To prevent risk of fire or electric shock, avoid over loading wall outlets, extension cords, or integral convenience receptacles.
- Do not let objects or liquids enter the product.
- Use proper power sources. Plug the product into a proper power source, as described in the operating instructions or as marked on the product.

1.2 Features;

This manual describes how to use the Argon Stream2, an advanced but easy-to-use LAN/Wi-Fi connected audio system with the following modes:

- **Internet Radio** with access to over 20,000 stations, 'Listen again' broadcasts and podcasts
- **Music player** allowing easy navigation and playback through a network-stored library of music files including AAC+, MP3, WMA, WAV, FLAC 16 bit.
- **Mediaplayer**, "Play To" feature allowing media to be pushed from a PC running Windows 7 to Stream2 operating in Digital Media Renderer (DMR) mode.
- **Spotify Connect** play back and control. Via Spotify app.

Stream2 also provides the following features:

- Large **2.7 inch color display** for easy control and clear information display, with up to six lines of text plus status icons.
- **Wi-Fi Remote control** from an Apple iPhone, iPad iPod touch and Android, using the Argon Audio Wireless Device Remote Control application

- **Clock** with auto-update capability and **dual independent alarms**
- **Sleep/snooze**
- **UPnP Music player modes**
- **Multiple network profiles** for easy setup and portability
- **Multiple operating languages**

1.3 Carton contents;

We have during production and packing carefully checked and inspected the unit.

After unpacking please check for any damage from transport.

We recommend that you keep the original carton box and packing material for any future shipping.

In the carton box you will find:

- ARGON Stream2
- DC5V power adapter
- Quick start guide
- Remote control
- RCA connection cable

1.4 External resources

To operate Stream2, the following external resources are needed:

- A power source (100-240 V mains supply)
- A wireless network (provided through a router) with appropriate permissions and password if necessary (for *Internet radio* and *Network Music player* modes)
- Broadband Internet access (for *Internet radio mode* and Internet Software Update)
- A music library stored on the network (if you want to use this functionality)
- An Apple iPhone, iPad, iPod touch or Android device (for using the Wireless Device Remote Control application)

1.5 Conventions used in this manual

Button	(press) Physical button on the keypad
Option	(select) Menu option shown on the display
<i>Name</i>	Menu, screen or other name

2. Controls, connectors and display

2.1 Main controls

The Stream2 is fully and only controlled from the remote control. (There are no operating controls on Stream2 itself).

Operation can also be done from either the Spotify app. or the Argon Audio app.

For basic first time set-up the included remote has to be used.

Notice, before usage:

Remember to remove the small plastic piece from the bottom of the remote control to activate the batteries.

Function/usage

Control

Arrows/Select Press to scroll through a menu or station list. The chosen option is highlighted in reverse text (dark characters on a white background). Press to select.

Volume +/- Press to adjust the volume up or down

Button

Function/usage[1]

Power Standby: Turn on or back to standby mode (showing clock and date). Cancels sleep function.

Sleep Sleep/snooze: When playing, standby after a set time.

When alarm is sounding, snooze for a set time, by pressing the Snooze button.

Mode Mode: Cycle through the modes: *Internet Radio*, *Music player*

Alarm Enters alarm wizard, turns off alarm (when alarm is sounding) and toggles between alarms in standby.

- Info** Info: View more information about the station or track playing. Press again to cycle through further information screens then return to the normal *Now playing* screen.
- Back** Back: Return to previous screen. In play mode, this button may be used to return to the last track list or station list.
- Menu** Menu: Show menu for the current mode. Press again to show *Now playing* screen.
- Preset 1-6** Preset: Press for the Preset recall/Save menu;
- Mute** Pressing Mute will turn off the sound;

[1] Some buttons have alternate functions depending on whether they are pressed quickly or held down.

2.2 Spotify Connect Control and play back

Connect your Stream2 and Spotify control device to your home wi-fi or router via LAN

All devices need to be on the same wi-fi.

Get the Spotify app/Premium free trial

Download the Spotify app for your mobile or tablet from your app store, and take the Premium free trial. Log in to Spotify and start playing a track.

Play millions of songs on your Stream2.

To start with, your mobile/tablet and Stream2 need to be on the same wi-fi. Once in the Spotify app., tap on the Now Playing bar to reveal extra controls, and select the Speaker icon. On the Connect screen, just choose your Stream2 and it'll start playing. Adjust the volume at the volume bar below on the Connect screen.

2.3 Connectors (backside)

As shown below Stream2 has connectors/buttons (from left to right) for the following:

- Power On/Off
- Ethernet/LAN cable to Router connection
- RCA analogue stereo output
- Spdif/optical output
- 12 volt trigger output to turn on an Amplifier
- DC power in (5 V)

2.4 Screens

The screen shows various menus, dialogues and displays, as described below.

There are basically six types of screen:

- Standby (clock)
- Splash (mode)
- Now playing
- Dialogue
- Error/Information
- Menu

When text is too long to fit on the screen, it is first shown truncated, then, after a few seconds, slowly scrolls so that you can read it all.

The **Standby screen** shows the time, date and any active alarm times.

As you cycle through the play modes using **Mode**, Argon Stream2 shows a **splash screen** for each mode. After one second, Argon Stream2 enters the selected mode and tries to start playing the last station or track that was playing in that mode. If this is not possible, Argon Stream2 tries to connect to the selected source by scanning for stations, networks, or prompting for user input as appropriate.

Now playing screens show information about the audio source and track now playing, where available.

Dialogue screens are shown to allow the user to change settings. They vary in complexity from simple Yes/No options up to the scrollable network password input screen.

As with menus, the selected item is shown with a white background.

Dialogue screens mark the current setting with an asterisk (*).

Error/Information screens give specific messages for a few seconds, then change automatically to another screen.

Menus

Argon Stream2 has basically three types of menu. Use the **Select** and Arrows control to step through and select options. A scroll bar on the right of the screen shows if there are further options above or below those visible.

Each mode has a **Mode menu**, with options specific to that each Mode (Internet Radio or Music Player). For example, Internet Radio mode menu has just two options: Last listened and Station list.

In addition, each mode menu has two final options: **System settings >** and **Main menu >**. The '>' indicates options leading to further menus.

The **System settings menu** allows access to system settings and information such as network, time, language and software update.

Menus with more options than will fit on one screen have a scroll bar to the right.

The **Main menu** allows access to all modes

Some menus, for example the *System settings menu*, have several submenus.

3. Getting started/setup

Although the Argon Stream2 is sophisticated, getting started is simple.

For Music Player mode, you need a wired/wireless Ethernet network and an UPnP music server (e.g. a PC).

For Internet-connected modes such as Internet radio, you also need a broadband Internet connection.

To set up the Stream2:

1. Place Stream2 on a suitable shelf or table
2. Connect the power adaptor between Stream2 and the mains supply.

The setup wizard starts.

3.1 Setup wizard

When Stream2 is started for the first time, it runs through a setup wizard to configure settings for date/time and network. Once this has finished, the system is ready to use in most modes.

*Note: To change these settings later, select **Menu** > **System settings** >. To run the setup wizard again, select **Menu** > **System settings** > **Setup wizard**.*

Select **Yes** to start the setup wizard.

If you choose **No**, the next screen asks if you would like to run the wizard next time Stream2 is started. The system then starts without configuring time/date and network settings and enters the Main Menu.

Note: If power is removed while the wizard is in progress, the wizard will run again next time Stream2 is started.

3.1.1 12/24 hour display

To change between 12 and 24 hour display, select **Set 12/24 hour** and then select your preference.

3.1.2 Time/date

The time and date can be updated manually or automatically. With auto-update, the time and date are automatically synchronised with external clocks. Auto-update is generally more accurate.

Auto-update

Uses a time signal sent from the Frontier Silicon Internet radio portal when in any network-connected mode.

1. Select **Update from Network** or **No update**.
2. Set your time zone.
3. If your country uses daylight saving, the automatically updated time from the network may be wrong by one hour. When daylight savings are in effect (during the winter), turn on the **Daylight savings** option to rectify this.

Stream2 will auto-update from the selected source when time information is available.

Manual set

If you set **No update**, the wizard now prompts you to set the time and date manually.

The date and time are displayed as *dd-mm-yyyy* and *hh:mm AM/PM* with the first value, *dd*, active (flashing).

Adjust each value with the **Select** control. As each value is set, the next value becomes active and flashes.

Set Time/Date

-01-01-2007
11:42

3.1.3 Network

Stream2 is compatible with all common network protocols and encryption methods, including *Wi-Fi Protected Setup (WPS)*.

To connect Stream2 to your network, you need a Wi-Fi wireless router, together with password key if set

Select **WLAN region/country > Wi-Fi network (SSID)**, and then select a network from the list.

If the network is open (non-encrypted), Stream2 connects without any further ado; see *Completion* below.

Standard encrypted network

To enter the network's key (password), use the **Select** control to move the cursor through the characters and select.

As each character is selected, the key is built up near the top of the display.

There are three options accessible by turning **Select** back before the first characters (0123...)

– **Backspace**, **OK** and **Cancel**.

WPS encrypted network

WPS encrypted networks are identified by '[WPS]' at the start of the network name, and have three methods of connection. Select one and follow the prompts:

- Push Button >**
Stream2 prompts you to press the connect button on the router. It then scans for a ready Push Button Connect network and connects.
- Pin > (code number)**
Stream2 generates an 8-digit code number which you enter into the wireless router, access point, or an external registrar (e.g. advanced versions of Windows Vista).
- Skip WPS >**
Enter key as for a standard encrypted network, above.

For more information on setting up a WPS encrypted network, see your WPS router's instructions.

Completion

Stream2 tries to connect to the selected network.

If connecting fails, Stream2 returns to a previous screen to try again.

A blue rectangular screen with a white icon of a list with three items in the top left corner. Below the icon is the text "Network settings" underlined. In the center of the screen, the text "Please wait" is displayed above "Processing...\".

Please wait
Processing... \

A blue rectangular screen with a white icon of a list with three items in the top left corner. Below the icon is the text "Network settings" underlined. In the center of the screen, the text "Please wait" is displayed above "Connecting.\

Please wait
Connecting.\

 Connected

Connected

Setup wizard

Setup wizard
completed

Press 'SELECT' to exit

If the network connection is lost, Stream2 automatically tries to reconnect.

3.2 Other settings

3.2.1 Network

Stream2 remembers the last four wireless networks it has connected to, and automatically tries to connect to whichever one of them it can find.

You can see the list of registered networks through **Menu** > **System settings** > **Network** > **Network profile** >. From here you can delete unwanted networks by turning and pressing **Select** then confirming delete **Yes**.

There are also other options for viewing and manually altering network settings from **Menu** > **System settings** > **Network** > (for example setting up a wired network). Users experienced with networking may find these options useful for diagnosing and fixing network problems.

3.2.2 Language

The default language is English. To change, select **Menu** > **System settings** > **Language** > then select your language.

3.3 Internet radio portal registration

Argon Stream2 uses the Frontier Silicon Internet radio portal website that allows you to organise your favourite's lists and also listen to Internet radio on a computer.

The screenshot shows the Frontier Silicon Radio Portal interface. On the left is a navigation sidebar with sections for Search, Browse Stations (By location, By genre, By language, New stations, Most popular), Browse Podcasts (By location, By genre), and My account (My favourites, My added stations, My preferences). At the bottom of the sidebar are language options (English, Danish, Portuguese, Español, Norsk, Italiano, Français, Svensk, Nederlands, Deutsch, Suomi) and footer text (About us, Contact us, Logout, © Frontier Silicon 2008 | Legal).

The main content area features a header with the text "Access global stations" and "Personalise favourites", a search bar, and a "Search. Browse. Find." slogan. Below this is a "Mark's radio" section containing a table of radio stations. To the right of the table is a simulated radio player interface showing "Playing Radio Moris 128 K Segovibes faya av" and playback controls.

Station name	Location	Genre	Stream
2 Ten FM	Reading United Kingdom	Electronica	WMA 128K
BBC Radio 2	London United Kingdom	Variety	RealPlayer 44K
Capital Radio	London United Kingdom	Top 40	WMA 128K
Virgin Radio	London United Kingdom	Pop	MP3 128K
On Air Power	Internet Only	World Asia	MP3 128K
Antenna Uno	Catania Italy	Dance	MP3 96K
BBC Radio 1	London United Kingdom	Top 40/Dance/Rock	RealPlayer 16K
Radio Dzar	Internet Only	World Middle East	MP3 128K
108 Xtra	United Kingdom	Electronica	MP3 256K
Capital FM 96.4	Nairobi Kenya	Pop	WMA 20K
BBC RSLiveSportX International	London United Kingdom	Sports	WMA 48K
Classic FM	London United Kingdom	Classical	WMA 128K

To register your Stream2 with the portal, switch to Internet radio mode as described in Section 4, and then obtain your adapter's unique portal access code by selecting **Menu** > **Station list** > **Help** > **Get access code** >.

Write down the access code.

Note: Do not confuse the portal access code with the Adapter ID (from **Menu** > **System settings** > **Info**.)

Visit the portal website at www.wifiradio-frontier.com.

If this is your first visit to the portal, register for a new account, entering the following information:

- access code,
- your e-mail address,
- password,
- Adapter model (Argon Stream2).

If you already have an account and wish to add an additional adapter/radio, log in to your account and select **My preferences** > **Add another Wi-Fi radio**.

Once your Adapter is registered with the portal, you can immediately use the Internet radio favourites and added stations features.

3.4 Setting up a music server

In order for Stream2 to play music files from a computer, the computer must be set up to share files or media.

UPnP media sharing allows devices like Stream2 to play music from a shared media library, navigating through tag menus such as *Artist*, *Album* or *Genre*. If you are running a suitable server system such as a PC with Windows Media Player 10 or later (WMP), and your music library is well-tagged, then it is recommended to use media sharing. Only the UPnP server needs to be set up.

Notice: iTunes does not currently work as a UPnP media server, but there are add-ons available to work with an iTunes library.

3.5 Sharing media with Windows Media Player

The most common UPnP server is Windows Media Player (10 or later). Alternatively, other UPnP platforms and servers may be used. To set up WMP for media sharing, perform the following steps:

1. Ensure that the PC is connected to the network.
2. Ensure that the Adapter is powered on and connected to the same network.
3. In WMP, add to the media library the audio files and folders you want to share with Stream2 (**Library > Add to Library...**).
4. In WMP, enable media sharing (**Library > Media sharing...**).

Notice: setup can differ depending on which version of WMP you have

Notice; it may show; Argon Stream2, "Unknown device", "Frontier Silicon" or the Jupiter logo as shown below.

Make sure that the Adapter has access to the shared media by selecting it and clicking **Allow**. You can also set a name for the shared media in **Settings...** Click **OK** to close the dialogue boxes.

The PC is now ready to stream the music to the Adapter. The WMP UPnP service runs in the background; there is no need to start WMP explicitly.

3.6 Setting up Stream2 for “Play To” Windows 7 streaming media feature.

To set-up Argon Stream2 to be controlled and to stream music via Windows Media Player 12 (Windows 7 only), perform the following steps:

1. Ensure that the PC is connected to the network.
2. Ensure that Stream2 is powered on and connected to the same network.

Note: Stream2 must be in an Internet radio mode to be detected.

3. From the Windows 7 main screen, select **Start > Devices and Printers**.
4. Select the **Add a device** tab in the top left of the Devices and Printers window and follow the instruction prompts given by the wizard.

In the Devices and Printers window a icon *) will appear and you are now ready to stream your Windows media music files to Stream2.

**) To change the name of your device, right click on icon and choose properties. Then choose UPnP and click on "device webpage"*

4. Internet radio mode

Stream2 can play thousands of radio stations and podcasts from around the world though a broadband Internet connection.

When you select Internet radio mode, Stream2 contacts the Frontier Silicon Internet radio portal to get a list of stations, organised into different categories like Country, Most popular and Genre. Once you select a station, Stream2 connects directly to that station.

The portal also enables multiple lists of favourite stations that you can personalise, for example *Andy's stations*, *Jo's favourites*, *Talkshows*. To use the favourites feature, register your Adapter with the portal website as described on page 27. If you have several Frontier Silicon devices, you can register them all on the same account so that each device has access to your favourite's lists. It is possible to add favourites either directly through Stream2 or through any computer with a web browser.

To enter Internet Radio mode, either press **Mode** until the display shows *Internet Radio* or select **Menu** > **Main menu** > **Internet Radio**.

Note: The station list menu is provided from the Internet radio portal, so it is only accessible when Stream2 is connected to the Internet. Station lists and submenus may change from time to time.

There are several ways of selecting stations.

Directly from the Adapter's remote:

- Last listened
- Presets

From the portal through the **Menu** > **Station list** > menu:

- Favourites lists
- Browse by Country, Genre, Most popular, Newest
- Search by keyword
- My added stations

If you are already listening to an Internet radio station, you can press **Back** rather than **Menu** to quickly return to the last visited branch of the menu tree. For example, suppose you were listening to *New Orleans Radio* through the browse facility as described in section 4.4 below. Pressing **Back** would return you to the *Highlighted Blues stations* menu. Pressing **Back** again would return you to the *Blues* menu, and so on.

4.1 Last listened

When Internet radio mode restarts, the last-listened station is selected. To select another recently used station, select **Menu** > **Last listened** then one of the stations listed. Most recent stations appear at the top of the list.

4.2 Presets

Presets are stored in the Adapter and cannot be accessed from other devices. To store an Internet radio preset, press and hold **Preset** until the display shows the *Save preset* screen. Select one of the 6 presets to save the currently playing station.

To select a preset, press **Preset** briefly, then select one of the listed preset stations. When a preset station is playing, it shows *Pn* (P1, P2 etc) in the bottom of the screen.

4.3 Favorites

Favourites are stored on the Internet radio portal. Before you set up an account on the portal from its Web interface (www.wifiradio-frontier.com), the favourites are associated solely with the device on which you set them. After you set up a portal account, all the favourites from your different devices are merged into a combined favourites list. This combined list is available to all the devices on your account. To store a playing station as a favourite, press and hold **Select** until the display shows 'Favourite added'. The station appears in the default favourites list *Stations*.

To select a favourite, select **Menu** > **Station list** > **My favourites** > [**Favourites list**] > [**Station**].

4. 4 Browse

To browse Internet broadcasts, select **Menu** > **Station list** > then either **Stations** > or **Podcasts** >.

Browse through the menus to find broadcasts.

Note:

BBC radio 'Listen Again' programmes are accessible through the Podcast menu, for example
Menu > **Podcasts** > **Location** > **Europe** > **United Kingdom** > **All shows** > **BBC Radio 4** > **You and Yours** > **20/10/2008 - October 2010**.

4. 5 Search

You can also search through Internet broadcasts for stations or podcasts with particular keywords in their title.

To search, select **Menu** > **Station list** > then either **Stations** > or **Podcasts** >

Enter a keyword by selecting characters then **OK**. The search entry screens are similar in operation to the Wi-Fi password entry screen.

Select a broadcast from the list.

For podcasts, you may be able to select a particular episode.

4.6 My added stations

Even though the Internet radio portal contains thousands of stations, you may want to listen to stations not listed. You can add your own stations via the portal. These added stations are accessible from Stream2 by selecting [Menu](#) > **Station list** > **My added stations** > [[Station](#)].

4.7 Now playing information

While the stream is playing, the screen shows its name and description. If artist and track information is available, this is also shown. To view further information, press [Info](#).

Each time you press [Info](#), another set of information is displayed, cycling through the following details:

- Artist and track name (default; where available)
- Station description
- Station genre and location
- Signal reliability
- Codec and sampling rate
- Playback buffer
- Today's Date

5. Music player mode (network)

Music player mode plays audio files such as MP3s, AACs, WMAs or FLACs from a computer on the local network.

To enter Music player mode, either press **Mode** until the display shows *Music player*, or select **Menu** > **Main menu** > **Music player**

Once in music player mode, press **Menu**, then select **Shared media**.

Note: Stream2 does not support USB playback as shown in the picture.

If you are already playing a music file, you can press **Back** rather than **Menu** to quickly return to the last visited branch of the menu tree. For example, suppose you were listening to the track *Heat* by the artist *50 Cent* through browsing shared media as described in section 0 below. Pressing **Back** would return you to the track listing for the album *Get Rich or Die Tryin'*. Pressing **Back** again would list all *50 Cent* albums. Pressing **Back** again would list all album artists, and so on.

If you use the Argon Audio App.for Android or IOS as remotes control you can use **<<** and **>>** to move through tracks. Press and hold to rewind or fast forward and press quickly to select previous or next track.

5.1 Shared media (from UPnP media server)

Select **Menu** > **Shared media** >

If you have set up shared media (as described on page 29), you should see an entry consisting of *<computer name>*: *<Shared media name>*, for example *JB-Laptop: Audio*. If you have more than one computer sharing media, the alternatives are listed. **Select** the shared media you want to play.

From this point on, the menus are generated from the shared media server (typically Windows Media Player). The first menu shows a list of media types, for example Music, Video, Pictures and Playlists. Stream2 can only play music and playlists.

There is also a search function, which finds tracks in a similar way to Internet radio search, as described on page 38.

From Music, there are numerous ways of selecting tracks, including:

- Genre
- Artist
- Album
- Composer
- Rating

Once you have found a track you want to play, press **Select**. A short press plays the track immediately and a long press adds the track to the playlist. You can also add entire albums to the playlist.

Stream2 plays either the selected track or the playlist.

5.1.1 Wake-on-LAN

If shared media is selected a list of available music servers will be displayed.

If a question mark appears before the server name, this indicates that the server has been seen before and supports Wake-on-LAN functionality, but cannot currently be found on the network.

If a server with a question mark is selected by the user, the device will try to wake the server up and connect to it. In some instances this may not be possible as the server may not be connected to the network any more or may be switched off.

5.1.2 Prune servers

From time to time it may be necessary to remove servers displaying question marks in front of the server name from the server list. For example, if the device is moved to a new network or if a Wake-on-LAN server is removed from your current network.

To perform this function go to **Menu** > **Prune servers** > **Yes**

5.2 Playlists

Stream2 holds a queue of up to 500 tracks in the playlist. Playlist tracks can be mixed from multiple UPnP servers. To manage the playlist, select **Menu** > **My playlist**.

- To view the playlist, scroll through it by turning **Select**. UPnP tracks show their track name.
- To play the playlist from a certain track, quick **Select**.
- To erase a track from the playlist, long **Select**, then confirm YES.

If you select a track/album/folder for instant playback (without using the playlist), the playlist is preserved. The playlist is also preserved during standby.

5.3 Repeat/shuffle

You can repeat tracks or play them in random order by selecting **Menu** > **Repeat play** or **Menu** > **Shuffle play**.

5.4 Now playing information

While a track is playing, the screen shows its track and artist (UPnP). There is also a progress bar with figures for elapsed and total track time. At the bottom of the screen, an icon indicates *UPnP*. To view further information, press **Info**.

Each time you press **Info**, another set of information is displayed, cycling through:

- UPnP: playback progress bar (default), album, codec/sampling rate, playback buffer bar, today's date

6. Using the “Play To” feature in Windows 7 to stream media

One of the new Windows 7 features includes a feature called “Play To” and this lets your PC running Windows 7 control Stream2 to push media and use as a universal remote control for your media collection.

Stream2 supports the industry standard DLNA (Digital Living Network Alliance) 1.5 digital media renderer. This allows you to “Play To” other devices around your home and combine media streaming with controlling a connected media receiver while streaming content to it from another Windows 7 PC on a home network.

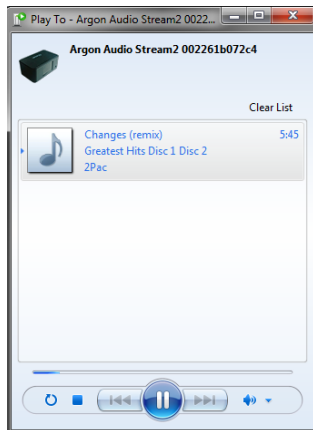

Before you can use the “Play To” feature you need the set-up Stream2 for Windows 7 streaming media.

6.1 Use “Play To” in Windows Media Player

Windows Media Player makes it easy to manage your media, find items that you want to play, and open Play To. To select items that you want to play, follow these steps:

1. Click the **Start** button, click **All Programs**, and then click **Windows Media Player**.
If the Player is currently open and you’re in Now Playing mode, click the **Switch to Library** button in the upper-right corner of the Player.
2. If the list pane is closed or if the **Burn** or **Sync** tabs are exposed, click the **Play** tab.
3. Find the items that you want to play in the Player Library, and then drag those items from the details pane into the list pane.
4. Click the **Play to** button at the top of the list pane, click the device on your network that will receive the media.

- In the **Play To** dialog box, use the playback controls to play, pause, or stop the media stream, and to change to the next or previous item in the list.

6.2 Use “Play To” elsewhere in Windows 7

Outside of Windows Media Player, you can stream media to Stream2 with “Play To” by right-clicking music files. To select music files and stream them to Stream2, follow these steps:

1. Click the files you want to stream to Stream2.
2. Right-click the selected files, point to “Play to”, and then click the device on the network that will receive the media.
3. In the Play To dialog box, use the playback controls to play, pause, or stop the media stream, and to change to the next or previous item in the list.

6.3 Now playing information

While a track is playing, the screen shows its track name (UPnP). There is also a progress bar with figures for elapsed and total track time. At the bottom of the screen, an icon indicates UPnP. To view further information, press **Info**.

Each time you press **Info**, another set of information is displayed, cycling through the following:

- Artist, album, codec/sampling rate, playback buffer

7. Alarms and sleep

As well as a clock/calendar, there are two versatile wake-up alarms with snooze facility, and a sleep function to turn the system off after a set period. Each alarm can be set to start in a particular mode. To set the clock/calendar, see page 19

7.1 Alarms

To set or change an alarm, either press **Alarm** or select **Menu** > Main menu > Alarms.

Select the alarm number (1 or 2) then configure the following parameters:

- **Enable:** on/off,
- **Frequency:** Daily, Once, Weekends or Weekdays,
- Time,
- **Mode:** Buzzer, Internet radio
- **Preset:** Last listened or 1-6,
- **Volume:** 0 – max.

To activate the new settings, scroll down and select **Save**.

The screen shows active alarms with an icon at the bottom left.

At the set time, the alarm will sound. To temporarily silence it, press **Snooze**. You can change the snooze period with the **Select** control if you like. The Adapter returns to standby for the set period, with the silenced alarm icon flashing.

Set snooze

5 MINS

7.2 Sleep

To set the sleep timer, select **Menu** > **Main menu** > **Sleep** then choose from **Sleep OFF**, **15 MINS**, **30 MINS**, **45 MINS** or **60 MINS**.

Once you select a sleep period, the system returns to the main menu. Press **Menu** to return to the *Now playing* screen.

8. UNDOK Wireless Device Remote Control

The UNDOK Argon Audio Wireless Device Remote Control is an application for IOS and Android devices that allows users to control Argon radios from these devices. Using the Wireless Device Remote Control application, you can navigate between the radio's music modes and browse and play content remotely.

The UNDOK Wireless Device Remote Control works on all iPhones, iPod touch and iPad devices running iOS 3.1.3 or later as well as Android devices running 2.2 or later. It is compatible with the IR2.2 software running on the Argons's Venice 6.2 module and all Venice 6.5 modules. Wireless Device Remote Control is not compatible with iNet1.

Note: For brevity, "Phone" is used to mean iPhone, iPod touch, iPad and Android" in this chapter.

8.1 Obtaining and installing the UNDOK Wireless Device Remote Control application

To install the UNDOK Wireless Device Remote Control application on the Phone:

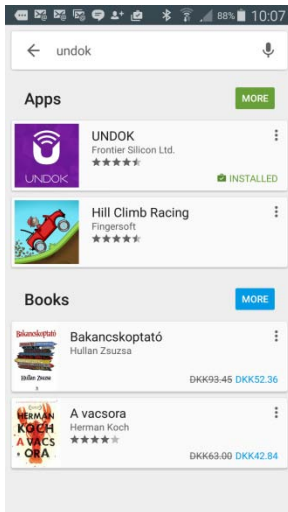

1. In the Phone's main menu, open the App Store/Play store by clicking the App Store icon:

App Store icon

- In the App/Play Store, search for **UNDOK**
- Select **UNDOK – wireless device remote control**.

:

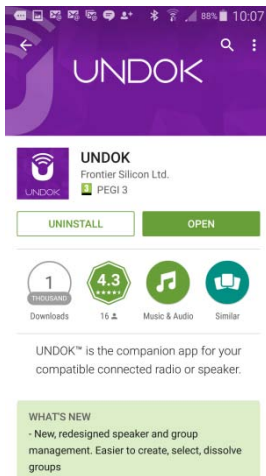

4. Tap the entry **UNDOK – Wireless Device Remote Control**.

The application details screen opens

5. Tap **Install**.

The UNDOK Wireless Device Remote Control application is downloaded and installed onto your Phone.

8.2 Setting up the connection to the Stream2

After you download the UNDOK Wireless Device Remote Control application, you must set up a connection between the Phone and the Stream2. To do this, follow these steps:

1. On the Stream2, navigate to **Menu** > **Main menu** > **System settings** > **Network** > **Keep network connected**, and select **YES**.
The network connection now stays on when the device is in standby mode. This setting is retained in the device's memory after it is switched off and on again.
2. Set the Phone to use the same network access point as the Stream2 as follows:
 - a. Select **Settings** > **Wi-fi**.
 - b. Choose the network of the Stream2. from the list.
 - c. If asked for a PIN code the default PIN code is 1234

Notice: the feature: "Set up audio system" in the UNDOK app only applies for Devices without display (Stream2 has a display so setup is done directly on the Stream2)

9. Inactive standby

Out of the box, the Stream2 come with an automatic standby function. If the product is not operated for two hours it will automatically go into standby. This applies also if the product is playing music.

This "feature" is a result of an EU law taking effect as of January 1st 2014.

To deactivate or change this "feature", do the following:

- Choose "Menu", Go to "System settings", Scroll down to "inactive standby" and press select
- Choose your preferred setting and press select

10. Software upgrades and factory reset

10.1 Software upgrade

From time to time, Argon Audio may make software upgrades available with bug fixes and/or additional features. You can either check manually, or set Stream2 to check periodically automatically (this is the default). If Stream2 detects that newer software is available, it asks if you want to go ahead with an update. If you agree, the new software is then downloaded and installed. After a software upgrade, all user settings are maintained.

CAUTION: Before starting a software upgrade, ensure that Stream2 is plugged into a stable mains power connection. Disconnecting power during a software update may permanently damage the unit.

To turn automatic checking on or off, select **Menu** > **System settings** > **Software update** > **Auto-check setting**.

10.2 Factory reset

A factory reset resets all user settings to default values, so time/date, network configuration and presets are lost. However, the Adapter's current software version is maintained, as is registration with the Internet radio portal. Internet radio favourites therefore remain unless you re-register your Adapter with another account on the portal website.

To perform a factory reset, select **Menu** > **System settings** > **Factory reset Proceed** > **Yes**.

11. Troubleshooting and error messages

11.1 Error messages

Message	Description	Example
Failed to connect	Correct key entered, but router rejects request	MAC filtering enabled on router
Format error	Cannot recognise file format - independent of network	Received .wma, but found that the stream wasn't WMA when trying to decode
Network error	Problem past router - incorrect data being received from network	Data obtained from server is unreadable.
Network not ready	Problem with connection to router	Router switched off
Network timeout	Problem past router - no response being received from network	Streaming IR station and suddenly station becomes unavailable
No UPnP media found	No UPnP servers found	
Unauthorised	Access not granted by UPnP server	Allow access for Stream2 in UPnP server settings
Update failed	Software upgrade failed	

11.2 Troubleshooting

Problem	Cause	Solutions
Cannot connect to network	Network down	Check that network is working between a computer and the router
	Router restricts access to listed MAC addresses	Obtain the Stream2 MAC address from Menu > System settings > Network > View settings and add to router list.
		<i>Note: Stream2 has separate MAC addresses for wired and wireless networks; only the current network adaptor method address is displayed, but the other address can be obtained by changing the first pair of digits between '00' (wireless) and '02' (wired)</i>
	Insufficient Wi-Fi signal strength	Check distance to router; see if a computer can connect to the network in this location
	Unknown encryption method	Change encryption method on router. Stream2 supports WEP, WPA and WPA2
	Unusual network configuration	Setup network manually through Menu > System settings > Network > Manual settings
	Firewall preventing access	Check the following ports are open on the router: UDP and TCP ports 80 and 123;
DNS port 53.		
Windows shares: ports 135 – 139 and 445.		
Windows Media Player: varies – non-Microsoft firewalls may require configuration for UPnP.		

Problem	Cause	Solutions
PRODUCT: the product turn off by itself	Automatic inactive standby function activated	See page 56
Cannot connect to Internet	Internet connection down	Check that Internet is working for a computer connected to the same network
	Firewall preventing access	Check the following ports are open: UDP and TCP ports 80 and 123;
		DNS port 53. Some Internet radio stations may require additional ports to be opened.
Cannot play particular Internet radio station	Station not broadcasting, overloaded or insufficient bandwidth.	Try other stations; try listening on computer via Internet radio portal website; try later.
	Station broadcasting using unknown codec.	
	Link out of date.	

Glossary

MSC	(USB) Mass Storage Class (device)
UI	User Interface
UPnP	Universal Plug and Play
USB	Universal Serial Bus
WLAN	Wireless Local Area Network

Specifications:

Type: Spotify Connect, Internet Radio and UpnP Streaming Media Player
Inputs: Ethernet/Wi-Fi, 5V DC power via Mini USB
Output: RCA stereo, Spdif Optical and 3,5mm 12Volt trigger.
Main voltage: 220-240V, 50/60Hz
Output sensitivity: 2000mV (RCA) analogue
Optical output max.24bit/192Khz
Separation: >50dB
D/A conversion: Cirrus Logic CS4344 max. 24bit/192Khz. (notice FLAC support max. 16 bit)
